**To obtain a supply of the North Carolina Communicable Disease Report Cards: 704 336-2817 •**

1. Figures subject to change, diseases **bold, italic and an asterisk\*** are reported **immediately, bold & italic** within **24 hours** and 7 days for all others diseases.
2. This number reflects the number of AIDS cases reported this month to the North Carolina Department of Health and Human Services. As of January 1996, AIDS cases in North Carolina are attributed to year of report. The **cumulative** number for AIDS cases is **1,979** in Mecklenburg County and **14,384** in North Carolina as of December 31, 2004. The **cumulative** number of AIDS cases reported to the CDC is **929,985** in the United States as of December 31, 2003. AIDS case reporting began in 1981 in the United States and in North Carolina in 1984.
3. The **cumulative** number for HIV Infection (not AIDS) is **4,782** in Mecklenburg County and **27,454** in North Carolina. This figure is based on reports of confidential testing done between January 1990 – December 31, 2004. **Please note a change reflecting recent changes in North Carolina reporting, “HIV Disease” refers to all people infected with human immunodeficiency virus, with and without an AIDS defining condition. Previously data were reported separately for HIV and AIDS. Currently AIDS cases are subset of HIV disease. AIDS case reporting began in the United States in 1981 and North Carolina in 1984. HIV infection reporting begin in North Carolina in January 1990 and HIV disease reporting in 2001. While all states report AIDS, all states do not report HIV infection or HIV Disease. As a consequence, national numbers for HIV disease are not available.**
4. Morbidity cards do not always indicate Penicillinase-testing results. The PPNG number is included in gonorrhea total.
